Threat

A computer threat MIGHT include a Trojan, virus, spyware, back-doors etc. each has its own meaning.

Virus

A computer virus is a self-replicating program that can copy itself and infect a computer without the

user's knowledge. A computer virus is a program that can replicate itself and spread to other computers. It is a type of malware that can cause damage to a computer system.

Computer viruses are a type of malware that can replicate themselves and spread to other computers. They are often hidden in files and can be activated when a user opens a file or runs a program. Computer viruses can cause damage to a computer system, such as deleting files or corrupting data.
